

Abstract

A printhead assembly for a camera system that includes an ink reservoir assembly that is mountable on the chassis of the camera system and defines at least three ink reservoirs in which differently colored inks are received. The ink reservoir assembly defines an outlet. A guide assembly is positioned in the ink reservoir assembly to define three discrete ink paths that open at the outlet. A printhead integrated circuit is positioned in the outlet to span the printing path. The printhead integrated circuit defines three sets of inlet apertures, each set of inlet apertures being aligned with a respective ink path.
